#### Will Dedicate Next Monday. · Personal and Social. ·

Mrs. W. B. Shotwell and children returned last week from an extended stay in South Carolina.

Mr. Parrot has switched from the Darby to the Chamberlin store, where latka, who will also be the pastor of the he will now clerk

Mr. and Mrs. Henry Hutchinson, jr., of Palatka, spent Saturday and Sunday here the guests of the Misses Williams. Mrs. Victor Smiley and little son have

been visiting Mrs. Smiley's parents at Huntington-Mr. and Mrs. J. H. Babers, E. L. Mathis spent a day or two in parishoners in St. Augustine. Jacksonville during the week. The Mathis Company is now getting in new goods every day.

Mrs. V. J. Herlong and Miss Ruth Herlong, who have been sojourning for a time at Hendersonville, N. C. were expected home on Sunday.

which latter night she was to lecture.

The Crescent City baseball club had a pleasant outing in Palatka last Monday. though the pleasure would have been all the more apparent had they won the

A white barber who worked here for week or more and boarded with Mrs. Robinson, skipped out last week forgetting (2) to pay his board bill.

Wallace Smiley and Her Babers have gone to Virginia for a time to work in the apple packing business. Being expert orange packers they were selected by the Apple Growers Exchange to help out during the Virginia shipping season

Audley Eaton, with T. C. Darby, jr. and W. J. Newman, has gone on a cruise down the east coast, through the canal, the Halifax and the Indian river, launch, and are making it a vacation

Miss Sarah Andersen returned Tuesday from two weeks at Sea She reports that her mother is making slow improvement and appears to enjoy the change. Miss Mabel Andersen will now go over and remain with her mother for a time.

Postmaster Lounds has been commis sioned by the committee of the Jacksonville board of trade to accept subscrip tions for purchasing a silver service for the new battleship "Florida." All con tributors to this fund will have their names published in a book to go with the service. The battleship Florida will be the largest battleship in the U.S. Navy when it goes into commission.

James Padgett, jr., has been awarded the contract for constructing two miles of clay roadway to begin at the intersec tion of the shell and Seville roads and continue two miles south. The contract price, to be paid from the county bone issue, is \$1,400 per mile. Mr. Padgett was to begin this week, beginning a the south end and working north; this for the reason that the clay deposit is nearer that end.

Rev. E. P. Butler and Miss Butler die not return last week. Instead, Mr. W. J. Norton had a letter in which the good pastor said he would try and be here fo E. T. CLARK, Traffic, Manager, service next Sunday, and that if he could not come in person he would arrange for a substitute. It is therefore quite certain that services at the Presbyterian church will be resumed next Sunday. It is feared that Mr. Butler was detained because of the illness of either himself or Miss Butler.

Mr. and Mrs. Eugene D. Lounds re turned from their wedding trip of nearly two months on Sunday evening. During their absence they have been as far north as Quebec, where they visited the ald. shrine of Ste. Anne de Beaupry and Yellow Pine Wood in Montreal where they saw the cage in which Dr. Crippen was kept during his enforced stay in that country. They saw the peaks of the White mountains, and witnessed the frivolities of the careless in New York city. Saw Washington and Richmond and took in the resorts of North and South Carolina. They have been some, but are glad to get home-and we are all glad to have

E. L. Bevins, who slipped quietly away some three weeks ago, is having real joy ride through the northland. Mr. Bevins has lived in Crescent City and vicinity for fully 30 years and during that time has been away but little. To friends here he has written from Janesville, Wis., and again from Houghton, a city FOR SALE - Lady Thompson and in the copper mining district of the upper peninsula of Michigan. From there it is his purpose to cruise through Lake Superior, the Sault Ste. Marie canal, lakes Huron, St. Claire, Erie and Ontario, and on down the St. Lawrence river to the seaboard. He will visit Boston, New York and Washington and thence come home. Mr. Bevins is one of our oldest and mostly highly esteemed citizens and during his long residence here it is doubtful if he has made any proof.

Mrs. John Mackey, Moultrie Road, trip to the north. He writes that the changes since he last saw that country, have been wonderful. To such a man a great trip of this kind is a sure enough trip to the north. He writes that the

## ON CITRUS TREES

Disease Spreading in Crescent City Groves.

On invitation of Mr. B. F. Tillingh hast of this place, Professors B. F. Barry, pastor of St. Monicas church, Pa- Floyd and H. S. Fawcett of the department of Plant Pathology at the Agricul tural Experiment Station connected with the State University at Gainesville, visitpose of investigating a new disease-or dioceses in the Philippine Islands, which ers in this vicinity have detected lately in their groves.

As soon as these gentlemen were shown the affected trees they pronounced

Under the guidance of Mr. R. I. Boardman, Mr. Tillinghast and Col. Graham, Professors Floyd and Fawcett visited the groves of E. H. Williams, D. organ as yet, but I have thought that in the Hurlbut grove much more was

to the south of town and marked with copper tags some 70 different specimens of fruit-part of which was affected with the disease and part not. He expects to return in about a month and reexamine the fruit on the marked trees for the purpose if possible of determin ing the cause of its spread.

Both these gentlemen will return to Crescent City about October 1st, at ble. which time they will be glad to meet as pect, many of the growers as care to see them. will be given in the News.

Prof. Faucett visited the groves to the orth and got samples of the wood, oots and soil. What is known of this disease appeared in an article by Prof. Floyd in a late issue of the Florida Fruit and Produce News, which we reproduce as follows:

#### MELANOSE

There has been much complaint dur ing the present summer of the presence of Melanose on citrus fruits. The most of these complaints have come from the northern half of the citrus belt, where the disease seems to be the most preva-lent. One grower writes, "There are thousands of oranges in the groves hereaouts affected." The question of all is, What is it and what is the treatment? General Appearance.

Melanose is a disease that starts only on the young leaves, stems and fruit. As the tissue of these parts grows older, it becomes immune to attack. The in-dividual marks, or spots, caused by the disease, start as sunken points, which grow larger and more evident as the tissue grows older. They may reach a diameter as great as 1-16 of an inch. Frequently these marks are so plentiful that as they grow they run together, forming a mass or area in which the individuality of the marks will be lost.

The individual markings, and some imes the areas, become arranged in circles, or parts of a circle. This is characteristic of Melanose.

In many cases, particularly if the fruit hangs so that water drips onto it from a leaf or branch above, the location of the areas will resemble withertip tear-

Description of the Marks. The markings of the Melanose in its nature condition are wax-like and redlish brown in color. They somewhat

surface. Effect Upon the Plant.

Leaves, stems and fruit are affected by the Melanose. Where markings are very plentiful the leaf may be stunted and deformed. Such leaves will be more or less bleached.

Upon the stems and fruits the mark-ings more frequently run together, form-ing areas. Where the disease is severe he stems will be more or less complete v covered with the markings. terminal twigs, when severely affected, will die and dry up, appearing very much the same as the stained terminal

branches in dieback.

The fruit, when severely affected a an early age, will be stunted. In most cases it will grow to a normal size, but will have the markings more or less completely scattered over its surface. The markings are not attached bodies like a scale, but are a part of the tissue of the fruit itself. Therefore they can not be removed and the fruit is worth-

less for shipment.

The development of areas is greatest on the fruit. Very often they are large, cake-like, and cracked in lines like dried mud.

Melanose and Dieback.

It frequently happens that Melanose and Dieback are confused. In some cases it requires very close observation to distinguish between the two. The following are some of the points of difference between the two diseases.

Melanose. The markings of the Melanose on the leaves, stems and fruits are the same. 2. Its markings are very superficial and in most cases they and in most cases they are slightly raised above the surrounding tissue.

3. The markings are very small, in-

dividual, and scattered like pepper over the affected surface. Often areas of the markings will interlace, surrounding little fields of green.

4. The markings are sometimes ar-

ranged in circles or parts of circles.

5. No gum is formed in the angles of the segments and surrounding the seed in the fruit.

Dieback.

The symptoms of the dieback on the stems, leaves and fruit are varied.

Any staining of the leaves that would be at all comparable to melanose markings very seldom occurs.

2. The dieback staining that occurs

on the fruit and stems is almost never raised, and extends to more or less depth in the tissue.

3. Dieback stains nearly always occur n areas that are more or less continuous. Stained areas caused by dieback are never arranged in circles or parts of

5. Gum is very often formed in the angles of the segments and surrounding the seed in the fruit.

Prevention.

Melanose is present in small amount a nearly all groves. It is usually found on the rank-growing water sprouts. It is of practical injury to the leaves and is of practical injury to the leaves and stems only in severe cases. This is different with the fruit, where only a small amount will render it unsalable. No treatment is known that will cure the marks caused by the disease. Pre vention is the only remedy. Since the disease starts only on very young tissue, the fruit becomes affected when it is very young. Therefore, methods of prevention must be carried out in the

In 1894, Swingle and Webber found that melanose could be controlled by the use of Bordeaux mixture, or amvisited the groves of E. H. Williams, D. Varnes McCormick & Hubbs, B. F. Tillinghast, Col., Graham, L. A. Hurlbut, David Dawes, W. F. Glynn and A. P. DeWolf. The disease was found in all these groves to a limited extent, but in the Hurlbut grove much more was found than in any of the others.

Prof. Floyd went through the groves to the south of town and marked with scale to develop. moniacle solution of copper carbonate. scale and allow this scale to develop, Hence these sprayings should be follow ed at intervals with some good insecti cide until the friendly fungi have re

Specimens Wanted.

In order to ascertain the severity and distribution of the melanose during the present season through the State, the mens from as many localities as possi All growers who know, or sustheir fruit, are requested to send two or many of the growers as care to see them.

If possible due notice of their coming gist, Agricultural Experiment Station, Gainesville, Florida. All question concerning this or other disease condi-tions in the grove will be answered.

> Take HERBINE for all disturbance in the bowels. It purifies the bowe channels, promotes regular movements and makes you feel bright, cheerful and vigorous. Price 50c. Sold by Ackerman-Stewart and J. H. Haugh-

> > Webster Was Willing.

When Daniel Webster's market man had sued him for a long unpaid bill and got his money he was so scared at his temerity that he stopped calling at the door for orders. The godlike Daniel asked him why one day, and the man confessed that he supposed Mr. Webster would never trade with him again. "Oh." said Webster. "sue me as often as you like, but for beaven's sake don't starve me." There was never a time when the great man was not willing to owe as much as anybody was willing to let him owe.

When you have an achey, stretchy feeling and you are dull, tired and discouraged it is a sign of approaching malaria or chills. You should act mickly to ward off an attack. HER BINE offers you the help you need. It destroys the malarial germ, drives out all impurities and makes you feel bright, vigorous and cheerful, Price 50c. Sold by Ackerman-Stewart and J. H. Haughton.

"All things come to him who waits."
"But there doesn't seem to be any

place to wait."-New York Press. Yellow complexion, pimples and resemble a drop of melted sugar burned figuring blemishes on the face or body to a reddish brown color. They are can be gotten rid of by doctoring the to a reddish brown color. They are can be gotten rid of by doctoring the slightly raised above the surrounding liver, which is torpid. HERBINE is a powerful liver correctant. It puri-fies the system, stimulates the vital or-gans and puts the whole body in fine vigorous condition. Price 50c. Sole by Ackerman-Stewart and J. H. Haugh

> The Dog's Tail. Why is the center of a tree like a dog's tail? Because it is farthest from the bark.

#### LATE SUMMER FERTILIZING

FOR GRAPE FRUIT TREES

This is the time of the year when the bearing limbs of grape fruit trees are bending down and the leaves begin to turn yellow. The yellowing of the leaves is due to the fact that, in order to mature the fruit, nature is drawing the stored up plant food from the leaves, twigs and limbs, and sending it into the fruit. At this season of the year the growing fruit requires plant food faster than the tree can make it and it is for just this purpose that nature has stored up plant food in the twigs and limbs, to have it ready when the demand is made for it. But when the plant food is drawn out, unless it is replaced, the leaves turn yellow and the twigs de, and when the fruit has matured and been picked, dead limbs show the next year where the heavlest fruit was gathered.

These dead limbs might just as well have been kept alive and healthy to bear crops again the following year.

By giving the trees the proper kind of fortilizer now, so that it can be taken up and converted into plant food during the September growth, these twigs can be revived and kept alive through the winter and in the spring many of them will put on bloom and bear fruit.

Another reason for feeding the twigs now is, that if the twigs are not fed, when the plant food is drawn out of them they are left. In a weakened condition and are more easily attacked by fungons diseases, which not only kill the twigs themselves but frequently cause the fruit to drop and in many cases cand, as said above, many of them become fruit producers.

In order to make grape fruit growing producers. FOR GRAPE FRUIT TREES

and, as said above, many of them become fruit producers.

In order to make grape fruit growing profitable, the trees should be well fed and cared for, enabling them to bear large crops every year, and in order to do that they require special fertilizer that will not only keep them well fed but also in a healthy condition.

The E. O. Painter Fertilizer Company manufacture special fertilizer for grape fruit trees. A liberal application of their fertilizer now will not only keep the trees in a good healthy condition, assisting them to resist fungous attacks, but will also put them in condition to bear good crops next spring.

Everyone desiring information regarding special fertilizer for grape fruit trees is invited to write to the E. O. Painter Fertilizer Co., Jacksonville, Fla., and their inquiry will receive prompt and careful attention.

WE WISH TO ANNOUNCE to the people of this section that we are adding weekly to our Dry Goods Department, and have competent help in charge. It will pay you to look them over. We have always recognized that Quality was the cardinal principle in all merchandise and especially Dry Goods. Will you do us the favor to look over
